About the Composer

ACKNOWLEDGEMENTS

At the end of 2016 I received a letter from a cellist who I do not know well even today. She said that she and her German guitarist colleague have performed my recent work 'The Broken Olive Branch'.

I was astonished as I was expecting a news from Italy by that time. It is so pleasant to hear one of my works performed suddenly. I usually dedicate my work to the person who performs it. But 'The Broken Olive Branch' was requested from Italy first.

So I decided to write a new work for the courageous Russian lady from Germany:

Thank you Daria B.

FOREWORD

I travelled from Illinois to San Francisco to write a computer generated music in 1990 Summer Course of Stanford University's CCRMA lab.

Piece for Computer and 4 Trombones

[http://imslp.org/wiki/Piece_for_Computer_and_4_Trombones_\(Sarat,_Ali_Riza\)](http://imslp.org/wiki/Piece_for_Computer_and_4_Trombones_(Sarat,_Ali_Riza))

Its subtitle is 'Death on the Border'. It is so amazing that now I have similar possibilities on my table at my Home.

'At the Edge' is the situation of human being in the world of 2017. We are at the edge of enormous progress in science and technology, progress that we cannot even imagine.

The vast majority is only being swayed by the progresses that are happening and sometimes getting easily manipulated.

A moral and social response has to be developed with a special emphasis on education and equal opportunity.

I tried to give a sense of this human situation by the cello performer's unavoidable difficulty while playing 'At the Edge'.

INTRODUCTION

This piece is an open-ended self discussion of what can be done as a computer aided music work.

The computer generated parts are sometimes mixed with manually composed sections. Sometimes this mixture is done homogeneously, sometimes heterogeneously. This is achieved by manually changing/retouching computer generated parts.

The term 'Computer generated' should not mislead you. Computer generation is based on composition algorithms which are manually programmed so that monotonous effects are avoided unless it is required to increase tension.

For example an array of 5 notes A, Gb, E, F, C# may be put into an array and a random number between 0 and 4 generated. This produces a real randomness effect. A note may be repeated a number of times by chance. This has to be changed, so that a pitch that has been played once may not be played for a couple of throws of the dice. This is the random repetition depth. An artificially beautiful randomness appears if repetition depth is increased. The depth decrease helps to increase tension where needed.

It is possible to imitate/approach human manual composition by deliberately changing and manipulating algorithms. For example, you can put artificial randomness in not only pitch but also rhythm values, etc.

It is also possible to imitate computer generation by hand but this effort is also limited by the sheer volume of the computer generation.

The computer generation may also be used just to produce the base line like a carpet weaver using a white layer of threads to tie the color nodes on.

Uniqueness and mutation are issues that has to be pondered upon in this approach to music composition.

ANALYSIS

Just a few words about the things I was faced with during the composition process of 'AT the Edge':

What is unique? What is mutated?

Something unique can be differed from others.
Something unique has a unity.
Something unique has an identity.

A truly unique thing is something that can not be mutated.
A truly unique thing exists on its own, with nothing similar to or copied from it.

On the other hand, a mutation is not unique in the presence of an original.

By definition, sound/music is an episodic event queue of frequency, duration.

A melody becomes unique when it is heard for the first time provided that it has a unity. If a change to the melody mutates the melody but does not effect its percieved identity it is a non-destructive mutation.

Randomly generated mutations may be limited not to cause (or to cause) destruction of the unique melody.

What happens in the case of a random or limited alleatory melody? Notes that are not generated according to the fundamental algorithm may destruct the limited alleatory melody depending on a definite condition. This condition may change according to the character of the original limited alleatory melody.

A limited alleatory melody may be mixed with another melody. For ex. introduction of constant pitches with constantly seperated instances, may give a unique perception of an atomic character. Mixing of limited alleatory with a unique melody breaks the randomness, rather balances its effect.

Barcarolle

Ali Riza SARAL

Andante $\text{♩} = 80$

Musical notation for measures 1-5. The piece begins in 6/8 time with a treble clef. Measures 1-4 feature a complex rhythmic pattern of eighth and sixteenth notes. Measure 5 starts with a bass clef and a melodic line.

Musical notation for measures 6-11. The bass clef continues, featuring a melodic line with various intervals and accidentals.

Musical notation for measures 12-16. Measures 12-15 continue in the bass clef, while measure 16 switches to a treble clef.

Musical notation for measures 17-22. The treble clef continues, showing a melodic line with a mix of eighth and sixteenth notes.

Musical notation for measures 23-27. The treble clef continues, featuring a steady eighth-note pattern.

Musical notation for measures 28-32. The treble clef continues, with a melodic line that includes some chromaticism.

Musical notation for measures 33-37. The treble clef continues, showing a melodic line with various intervals.

$\text{♩} = 72$

Musical notation for measures 38-40. Measures 38-39 are in the treble clef, and measure 40 is in the bass clef.

Musical notation for measures 41-42. The bass clef continues, featuring a melodic line with a mix of eighth and sixteenth notes.

Musical notation for measures 43-44. The bass clef continues, showing a melodic line with various intervals and accidentals.

♩ = 72

72

Musical staff 72-73: Treble clef, 7/8 time signature. Measures 72-73. Key signature: one flat (Bb). Measure 72 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3. Measure 73 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4.

74

Musical staff 74-75: Bass clef, 7/8 time signature. Measures 74-75. Key signature: one flat (Bb). Measure 74 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4. Measure 75 contains a triplet of eighth notes: C4, B3, A3, followed by a series of eighth notes: G3, F3, E3, D3, C3, B2, A2, G2.

78

Musical staff 78-82: Treble clef, 7/8 time signature. Measures 78-82. Key signature: one flat (Bb). Measure 78 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3. Measure 79 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4. Measure 80 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3. Measure 81 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4. Measure 82 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3.

83

Musical staff 83-87: Bass clef, 7/8 time signature. Measures 83-87. Key signature: one flat (Bb). Measure 83 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4. Measure 84 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3. Measure 85 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4. Measure 86 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3. Measure 87 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4.

91

Musical staff 91-93: Treble clef, 7/8 time signature. Measures 91-93. Key signature: one flat (Bb). Measure 91 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3. Measure 92 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4. Measure 93 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3.

94

Musical staff 94-96: Treble clef, 7/8 time signature. Measures 94-96. Key signature: one flat (Bb). Measure 94 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3. Measure 95 contains a series of eighth notes: C3, D3, E3, F3, G3, A3, B3, C4. Measure 96 contains a series of eighth notes: C4, B3, A3, G3, F3, E3, D3, C3.

27

29 $\text{♩} = 92$ *f*

32 *mf*

35 $\text{♩} = 80$ *mp* *f*

101

mp

Musical notation for measures 101-105. The key signature has one sharp (F#). The notation includes a bass clef, a series of eighth and sixteenth notes, and two triplet markings (indicated by a '3' and a bracket) over eighth notes.

106

p

Musical notation for measures 106-113. The notation includes a bass clef, eighth and sixteenth notes, and two triplet markings (indicated by a '3' and a bracket) over eighth notes.

114

pp *mp*

Musical notation for measures 114-118. The notation includes a bass clef, eighth and sixteenth notes, and two triplet markings (indicated by a '3' and a bracket) over eighth notes. The dynamic markings *pp* and *mp* are placed below the first and third measures respectively.

SHORT ARTICLE

Events are consequent.

We perceive events in an episodic sequence.

We perceive sentences word by word. But we understand them as a whole.
The meaning arises from the interaction of words grammatically, syntactically and lexically.

Knowledge is derived semantically and stored as such.

We remember episodic events but we know semantic information.

Music is an ever continuing series of sequential events, whether polyphonic or mono.
Remembering music depends on remembering the next item of the episodic sequence.

The meaning of music lies in the semantic elements.

Elements that can be perceived not sequentially but in parallel processing.

Human aural memory is not very long but it can be enhanced by GROUPING.

Each note being perceived may be related with a group of notes in the aural working memory.
Motives, sentences phrases have semantic relations such as IS A, BELONGS TO, INHERITS FROM etc.

Music has a semantical meaning.

About the Composer

Ali R+ SARAL has studied double majors and has two Master's degrees,

MSc and BSC from Istanbul Technical University and MM from Illinois State University.

He was accepted to the Istanbul State Conservatoire Composition and Theory Department and

studied harmony, counterpoint and others with Erçivan SAYDAM,

composition with İlhan USMANBAŞ.

He was a student of Roque CORDERO and Arthur CORRA at USA.

He has attended courses at Stanford University CCRMA lab and Darmstad 1996.

He has written 27 works of music approx. 6,5 hours long.

You can find his compositions at Petrucci Library: http://imslp.org/wiki/Category:Saral,_Ali_Riza

He has served EUROCONTROL and German airspace as an air traffic control engineer 1992-1997.

He has specialized in LARGESYSTEMS and Java-J2EE.

His areas of interest include Systems Psychology, ANN and parsers, automatic language translation.

He writes blogs at:
