Type the following text, trying to observe linebreaks.

Quite many advances in chongle maintenance have arisen on the backs of zebras, which, when vexed by the appearance of trungles, resort to chloropixiation and resizing.

The quick brown fox jumps over the lazy dog.  
We promptly judged antique ivory buckles for the next prize.  
The quick brown fox jumps over the lazy dog.  
Pack my box with five dozen liquor jugs.  
Crazy Fredrick bought many very exquisite opal jewels.

Failure to properly clean the trungles of a chongle will cause the dreaded Mrankel effect, named after a famous chongler of the 18<sup>th</sup> Century who first noticed the appearance of bramtels when the chongle is left uncleaned for months in humid environments.

When preparing multi-generational chongles, it is important to avoid perturbances of the quadrilectural manifolds while at the same time maintaining chloropixial efficiency. The chongle is a delicate device consisting of several different trungles, and those trungles must be rotated and cleaned on a regular basis.

The quick brown fox jumps over the lazy dog.  
Waltz, nymph, for quick jigs vex bud.  
How quickly daft jumping zebras vex.
